

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Ime predmeta: Anesteziologija in obravnava bolečine
Course title: Anaesthesiology and pain management

Študijski program in stopnja Study programme and cycle	Študijska smer Study option	Letnik Year of study	Semester Semester
Splošna medicina, enovit magistrski študijski program		Četrti	8.
General medicine, Uniform master's degree study program		Fourth	8th

**Vrsta predmeta (obvezni ali izbirni) /
Course type (compulsory or elective)**

obvezni
compulsory

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje Clinical training	Druge oblike študija Other forms of study	Samost. delo Individual work	ECTS
20	20	AV LV RV	20		60	4

Nosilec predmeta / Course coordinator:

prof. dr. Mirt Kamenik

Jeziki /Languages:

Predavanja / Lectures: slovenski/slovene
Vaje / Tutorial: slovenski/slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites for enrolling in the course or for performing study obligations:

Vsebina (kratek pregled učnega načrta):

Priprava bolnika na anestezijo, pomen spremljajočih bolezni. Anestetijski dihalni sistemi in anestetijski aparat. Splošna anestezija: inhalacijski anestetiki, intravenski anestetiki, opijati in mišični relaksansi. Splošna anestezija – postopki. Nadzor bolnika med anestezijo. Področna anestezija (subarahnoidna anestezija, epiduralna anestezija, intravenski blok, blokade živčnih pletežev). Nadomeščanje tekocin. Zapleti med anestezijo in po anesteziji. Dodatni postopki oživljanja. Enota intenzivne terapije - obseg dela in indikacije za sprejem. Zdravljenje s kisikom, umetna ventilacija indikacije in načini predihavanja. Fiziologija in psihologija bolečine. Anamneza in pregled bolnika z bolečino. Akutna bolečina, pooperativna bolečina; vrste in načini zdravljenja. Vrste bolečine in metode zdravljenja kronične bolečine: bolečina zaradi

Content (syllabus outline):

Preparation of the patient for anaesthesia, the impact of concurrent disease. Anaesthesia breathing circuits and the anaesthesia machine. General anaesthesia: inhalational anaesthetics, intravenous anaesthetics, opioids and muscle relaxants. Monitoring during anaesthesia. Regional anaesthesia (spinal anaesthesia, epidural anaesthesia, intravenous block, peripheral plexus block). Fluid management. Complications during and after anaesthesia. Advanced life support. Postoperative pain and methods for postoperative pain relief. Intensive care unit – the magnitude of work and indications for patient acceptance. Oxygen therapy, mechanical ventilation – indications and modes of ventilation. Physiology and psychology of pain. Anamnesis and examination of a patient with pain. Acute pain, postoperative pain; types and modes of treatment. Types

raka, nevropatska bolečina, kronična bolečina, ki ni posledica raka.

of pain and treatment methods of chronic pain: pain due to cancer, neuropathic pain, chronic pain which is not a consequence of cancer.

Cilji in kompetence:

Seznani študenta medicine z področji dela anesteziologa (anestezija, perioperativna intenzivna terapija in terapija bolečine). Študent spozna pomen priprave bolnika na operacijo, delovanje anestetikov, izpeljavo vseh faz anestezije, vrednotenje podatkov neinvazivnega in invazivnega monitoringa, spozna ukrepe zdravljenja v enoti intenzivne terapije, Ponovi temeljne in osvoji dodatne postopke oživljanja. Pridobiti osnovno znanje in veščine za diagnosticiranje in zdravljenje bolečine. Študent bo sposoben opraviti pregled bolnika z boleči no in jo opredeliti po vzroku, patofiziologiji, lokalizaciji in trajanju. Študent bo lahko ocenil bolečino, razumel njen vpliv na kakovost življenja bolnika in bo sposoben oceniti kateri načini zdravljenja so primerni za določeno vrsto bolečino. Študent se seznani z racionalnim načinom uporabe opijatov pri zdravljenju akutne in kronične bolečine, ter z drugimi metodami zdravljenja bolečine.

Objectives and competences:

To give the student an information about the field of work of an anaesthesiologist (anaesthesia, intensive care and pain therapy). The students will get the knowledge about the preparation of the patient for surgery, the mechanism of action of anaesthetics, management of anaesthesia, invasive and non-invasive monitoring during anaesthesia and in the intensive care, the methods of treatment of critically ill patients. The students will learn the methods of basic and advanced life support. Acquiring basic knowledge and skills for diagnosing and treatment of pain. A student will be able to examine a patient with pain and identify pain according to its cause, pathophysiology, localization and duration. A student will be able to assess pain, understand its influence on the quality of a patient's life and will be able to assess which modes of treatment are appropriate for a certain type of pain. A student is acquainted with rational mode of the use of opiates in the treatment of acute and chronic pain and with other methods of pain treatment.

Predvideni študijski rezultati:

Znanje in razumevanje:

Predoperativni pregled in priprava bolnika na operacijo
Oskrba dihalne poti in algoritem za težko intubacijo
Dodatni postopki oživljanja odraslega in otroka
Anestezijski dihalni sistemi in anestezijski aparat
Inhalacijski anestetiki, intravenski anestetiki, opijatni analgetiki, mišični relaksanti, lokalni anestetiki
Venski dostop in nadomeščanje tekočin med anestezijo
Področna anestezija (spinalna anestezija, epiduralna anestezija, blokade pletežev, intravenska področna anestezija)

Intended learning outcomes:

Knowledge and Understanding:

Preoperative visit and the preparation of the patient for surgery.
Airway management and difficult airway algorithm
Adult and paediatric advanced life support
Anaesthesia breathing circuits and the anaesthesia machine
Inhalational anaesthetics, intravenous anaesthetics, opioids, muscle relaxants, local anaesthetics
Venous access and fluid management during anaesthesia

Rutinski in invazivni nadzor obtočil med anestezijo Nadzor dihalnih plinov, mišične relaksacije in spanja med anestezijo Zapleti med anestezijo in po anesteziji Anestezija pri bolniku z boleznijo srca Intenzivna terapija (postopki, indikacije za sprejem) Zdravljenje s kisikom in ocena plinske analize arterijske krvi Uporaba vazotativnih učinkovin Študenti bodo spoznali pomen celostne obravnave bolnika z bolečino. Sposobni bodo pri bolniku ugotoviti vrsto in oceniti intenziteto bolečine, razumeti vpliv bolečine na kakovosti življenja. Študenti bodo usposobljeni uporabiti osnovne metode analgezije za doseganje učinkovite kontrole bolečine, klasificirati metode izbirnega zdravljenja po stopnjevalni shemi in oceniti učinkovitost zdravljenja bolečine. Delno bodo študenti usposobljeni za prepoznavanje in osnovno specifično obravnavo: akutne bolečine po poškodbi in operaciji, bolečine zaradi raka, nevropatske bolečine in kronične bolečine, ki ni posledica raka. Prenesljive/ključne spretnosti in drugi atributi: Veščine: Predihavanje z dihalno masko in uporaba ročnega dihalnega balona Uporaba orofaringealnega tubusa, laringealne maske in orotrahealne intubacije Vstavev venske kanile Odmerjanje zdravil med oživljanjem Defibrilacija s polavtomatskim in klasičnim defibrilatorjem Merjenje osrednjega venskega tlaka Nekrvavo in krvavo merjenje krvnega tlaka Vrednotenje pulznega oksimetra, kapnografije in plinske analize arterijske krvi Faze splošne anestezije (uvod, vzdrževanje, zbujanje) Spinalna in epiduralna anestezija Uporaba kisikove jeklenke in prenosnega ventilatorja Priprava in redčenje zdravil Priprava in menjava infuzijske raztopine Ocenjevanje vrste in intenzitete bolečine Predpisovanje neopijatnih in opijatnih analgetikov Pomen področnih tehnik v zdravljenju akutne in kronične bolečine. Ocenjevanje uspešnosti zdravljenja bolečine	Regional anaesthesia (spinal anaesthesia, epidural anaesthesia, plexus blockade, intravenous regional anaesthesia) Invasive and non-invasive cardiovascular monitoring during anaesthesia. Monitoring of exhaled gasses, muscle relaxation and sleep during anaesthesia Complications during and after anaesthesia Anaesthesia in the patient with concurrent heart disease Intensive care (treatment methods and indications for patient acceptance in the ICU) Oxygen therapy and blood gas analysis The use of vasoactive substances Students will be acquainted with the meaning of comprehensive treatment of a patient with pain. They will be able to identify the type of pain in a patient and assess the intensity of pain, understand the influence of pain on the quality of life. Students will be qualified to use basic methods of analgesia for the achievement of efficient pain control, classify methods of optional treatment according to a graded scheme and assess efficiency of pain treatment. Students will be partially qualified for the recognition and basic specific treatment: of acute pain after injury and operation, of pain due to cancer, of neuropathic pain and of chronic pain that is not a consequence of cancer. Transferable/Key Skills and other attributes: Key Skills: Artificial ventilation using a face mask and a self-inflating bag The use of oropharyngeal tube, laryngeal mask and orotracheal tube Intravenous line placement Use of drugs during resuscitation Defibrillation using an automatic or classical defibrillator Measurement of central venous pressure Invasive and non-invasive blood pressure measurement The use of the pulse oxymeter, capnography and blood-gas analysis General anaesthesia (induction, maintenance, awakening) Spinal and epidural anaesthesia The use of oxygen bottle and the use of a transport ventilator Preparation of the drugs Preparation and the exchange of intravenous fluid bottles Assessment of type and intensity of pain. Prescribing non-opiate and opiate analgesics. Meaning of field techniques in the treatment of acute and chronic pain. Success assessment of pain treatment.
