

Medicinska fakulteta

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet: Course title:	Kemija Chemistry
---------------------------	---------------------

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester			
Splošna medicina/General Medicine 2. stopnja/2nd Degree		1	1			
Vrsta predmeta / Course type	Obvezni/Obligatory					
Univerzitetna koda predmeta / University course code:						
Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
30	0	0	30		30	3

Nosilec predmeta / Lecturer:	prof. dr. Željko Knez, član SAZU
------------------------------	----------------------------------

Jeziki / Languages:	Predavanja / Lectures: Slovenski/Slovene
	Vaje / Tutorial: Slovenski/Slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:	Content (Syllabus outline):
<ul style="list-style-type: none"> • Zgradba atoma, kemične vezi, medmolekulske sile, biološko pomembni elementi, radioizotopi. • Voda: strukture, lastnosti, H-vezi, hidrofobne interakcije, voda kot topilo. • Raztopine: raztopljanje plinov v vodi, koligativne lastnosti raztopin, osmozni pojavi v celici, osmodiuretiki. • pH: ionizacija vode, Kw, pH, šibki in močni elektroliti, kisline in baze, pufri, puferski sistemi v organizmu, porazdelitev ionov v organizmu, biološki pomen pH. • Oksidoredukcija: definicije, kvantitativna karakterizacija redoks reakcij. • Redoks potencial in reakcijska prosta entalpija. • Hitrost kemičnih reakcij: definicije, red in molekularnost reakcij. • Hitrost kemičnih reakcij in ravnotežje. • Vpliv koncentracije, pH, ionske moči in temperature na hitrost reakcije. • Molekulske osnove življenja: biološko pomembni elementi,ioni in biomolekule. • Organske biomolekule: izomerija, medsebojni vpliv funkcionalnih skupin. • Pregled organskih spojin po funkcionalnih skupinah. 	<ul style="list-style-type: none"> • Structure of atom, chemical bound and intermolecular forces, biologically important elements, radioisotops. • Water: structures, properties, H-bound, hydrophobic interactions, water as solvent. • Solutions: solubility of gases in water, colligative properties of solutions, osmotic phenomenon in the cell, osmo-diuretics agents. • pH: ionization of water, Kw, pH, weak and strong electrolytes, acids and bases, buffers, buffer systems in organism, distribution of ions in the body, biological importance of pH. • Oxidoreduction: definition, quantitative characterization of redox reactions. • Redox potential and reaction free enthalpy. • Kinetics of chemical reactions: definitions, order and molecularity of reactions. • Kinetics and equilibrium of chemical reactions. • Influence of concentration, pH, ionic power and temperature on chemical reaction. • Molecular basics of life: biological important elements, ions and biomolecules. • Organic biomolecules: isometry, interacting influence of functional groups.

<ul style="list-style-type: none"> • Biološko pomembne organske molekule s primeri v medicini. • Kemija ogljikovih hidratov: monosaharidi, disaharidi, polisaharidi, homoglikani in heteroglikani. • Kemija lipidov in steroidov. • Aminokisline. • Nukleotidi in nukleinske kisline. • Vitamini. • Molekulsko modeliranje medicinsko pomembnih molekul in zdravil. 	<ul style="list-style-type: none"> • Review of organic substances according to their functional groups. • Biologically important organic molecules with examples in medicine. • Chemistry of carbohydrates: monosaccharides, disaccharides, polysaccharides, homoglycanes and heteroglycanes. • Chemistry of lipids and steroids. • Amino acids. • Nucleotides in nucleic acids. • Vitamins. • Molecular modeling of medically important molecules and medicines

Cilji in kompetence:

Cilj tega predmeta je obnoviti osnovna znanja iz splošne kemije in poznavanja kemijske zgradbe molekul in reakcij, ter razumeti kemijske reakcije in procese v človeškem organizmu.

Objectives and competences:

The objective of this course is to renew the basic knowledge of general chemistry and knowledge of the chemical structure of molecules and reactions, and to understand the chemical reactions and processes in human body.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Po zaključku tega predmeta bo študent sposoben:

- prepoznati in razlikovati molekule,
 - razumeti kemijske reakcije, ki potekajo v človeškem organizmu,
- razložiti transportne pojave v človeškem organizmu.

Prenesljive/ključne spremnosti in drugi atributi:

- delo v skupini,
- spremnost računanja.

Intended learning outcomes:**Knowledge and Understanding:**

On completion of this course the student will be able:

- to recognize and differentiate molecules,
- to understand the chemical reactions in human body,
- to explain transport phenomenon in human body

Transferable/Key Skills and other attributes:

- team work,
- computation skill.

Metode poučevanja in učenja:

- predavanja,
- laboratorijske vaje.

Learning and teaching methods:

- lectures,
- lab work.
