Nosilec predmeta / Course coordinator:

doc. dr. Janez Ravnik

Jeziki /Languages:

Predavanja / Lectures: slovenski/slovene

Vaje / Tutorial: slovenski/slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites for enrolling in the course or for performing study obligations:

Vsebina (kratek pregled učnega načrta):

- Predstavitev nevrokirurgije, kratek zgodovinski pregled
- Kirurška anatomija možganov
- Nevroni in nevroglija
- Glavne preiskovalne metode v nevrokirurgiji
- Razvojne nepravilnosti osrednjega živčevja (hidrocefalus, kraniosinostoz, encefalokela, mielomeningokela, Arnold-Chiarijev sindrom, Dandy-Walkerjev sindrom)
- Poškodbe glave in možganov (zlomi lobanjskega svoda in lobanjske baze, intrakranialni hematomi, strelne poškodbe, poškodbe glave in možganov pri otrocih, zdravljenje možganskega

Content (syllabus outline):

- Introduction to neurosurgery and short historical review
- Surgical Anatomy of the Brain.
- Neurons and Neuroglia.
- Main diagnostic procedures in neurosurgery.
- Developmental and Acquired anomalies: Hydrocephalus, Craniosynostosis, Encephaloceles, Myelomeningocele, Arnold-Chiari and Dandy Walker syndrome...
- Head and Brain Trauma: fractures of the skull and skull base, intracranial haematomas, penetrated injuries, peculiarities of brain trauma

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

### Cilji in kompetence:

### Objectives and competences:

Slušateljem bomo predstavili sodobno nevrokirurško prakso. Pri pouku bomo z njimi razpravljali o glavnih diagnostičnih postopkih, patofiziologiji in konzervativnem oz. kirurškem zdravljenju pogostih nevrokirurških stanj. Poudarek bo na reševanju ilustrativnih kliničnih primerov, z namenom, da slušatelji osvojijo znanje o pravočasnem prepoznavanju in napotitvi potencialnega nevrokirurškega bolnika na zdravljenje. Prav tako bomo slušatelje seznanili s posebnostmi ambulantnega vodenja nevrokirurških bolnikov in jih naučili prepoznavati in ukrepati ob morebitnih zapletih. Poseben poudarek, zlasti na seminarjih, bo na prepoznavanju in ukrepanju pri nujnih nevrokirurških stanjih. Ob delu s slušatelji nam bo osnovno vodilo to, da osvojijo zmožnost kritičnega mišljenja in logičnega razmišljanja.

Contemporary neurosurgical praxis will be presented to our students. During the lessons main diagnostic procedures, pathophysiology and treatment options of common neurosurgical problems will be discussed. We will mainly focus on illustrative clinical cases with purpose that our students will be able to timely recognize common neurosurgical conditions that require neurosurgical treatment. Characteristics of neurosurgical outpatients' department work as well as dealing with neurosurgical complications will also be discussed. Special attention especially during practical work will be given to common neurosurgical urgencies. Our main guidance during our work with the students will be that they conquer the ability for logical and critical thinking

#### **Predvideni študijski rezultati:**

Znanje in razumevanje:  
Študent medicine mora iz literature ali opisa spoznati in uvrstiti klinično sliko bolečine, razvojnih nepravilnosti, tumorjev baze lobanje, žilne nepravilnosti, da si lahko poišče dodatne informacije. Študent medicine mora poleg znanja opisanega zgoraj tudi znati obravnavati bolnika z intrinzičnimi in ekstrinzičnimi možganskimi tumorji, poškodbo možganov in degenerativnimi obolenji hrbtenice (za to klinično sliko pozna simptome, znake, postopek diagnoze in diferencialne diagnoze ter splošna načela zdravljenja).  
Prenesljive/ključne spretnosti in drugi atributi:  
Slušatelji naj osvojijo znanje o pravočasnem prepoznavanju in napotitvi potencialnega nevrokirurškega bolnika na zdravljenje. Prav tako bomo slušatelje seznanili s posebnostmi ambulantnega vodenja nevrokirurških bolnikov in jih naučili prepoznavati in ukrepati ob morebitnih zapletih.

#### **Intended learning outcomes:**

Knowledge and Understanding:  
Medical student should be able to recognize clinical picture of typical pain syndromes, developmental and acquired anomalies, skull base tumours, vascular abnormalities, so that he/she can find additional information's. Beside this student should be able to deal with the patients with intrinsic and extrinsic brain tumours, brain injury, and degenerative spine diseases. Student should be familiar with clinical picture, symptoms and signs, diagnostic procedures, differential diagnosis and treatment options.  
Transferable/Key Skills and other attributes:  
Students should be able to timely recognize common neurosurgical conditions that require neurosurgical treatment. Characteristics of neurosurgical outpatients' department work as well as dealing with neurosurgical complications will also be discussed.

#### **Metode poučevanja in učenja:**

Predavanja, seminarji, opazovanje operativnih posegov po dogovoru.

#### **Learning and teaching methods:**

Lectures, seminars, observation of common neurosurgical procedures upon request.

#### **Načini ocenjevanja:**

Opravljen seminar in vsaj 80% prisotnost na seminarjih je pogoj za pristop k izpitu.

Pisni izpit - esejska vprašanja.

Skupna ocena:

91–100 % = odlično (10)

81–90 % = prav dobro (9)

71–80 % = prav dobro (8)

Delež (v %) /

Share (in %)

**Pogoj za pristop**

**100**

#### **Assessment methods:**

Completed seminar and at least 80% attendance at seminars is a prerequisite for the exam.

Written exam - essay type questions.

Total grade:

91 – 100% = excellent (10)

81 – 90% = very good (9)

71 – 80% = very good (8)

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
