

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Ime predmeta:	Izbrane vsebine in novosti v molekularni biologiji
Course title:	Selected topics and novelties in molecular biology

Študijski program in stopnja Study programme and cycle	Študijska smer Study option	Letnik Year of study	Semester Semester
Splošna medicina, enovit magistrski študijski program		Prvi	2.
General medicine, Uniform master's degree study program		First	2nd

Vrsta predmeta (obvezni ali izbirni) /
Course type (compulsory or elective)

izbirni
elective

Univerzitetna koda predmeta / University course code:

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje Clinical training	Druge oblike študija Other forms of study	Samost. delo Individual work	ECTS
5	40	AV LV RV			45	3

Nosilec predmeta / Course coordinator:

prof. dr. Uroš Potočnik

Jeziki /Languages:

Predavanja / Lectures:

slovenski/slovene

Vaje / Tutorial:

slovenski/slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites for enrolling in the course or for performing study obligations:

Vsebina (kratek pregled učnega načrta):

DNA struktura in lastnosti, replikacija (prokarioti, eukarioti), rekombinacija DNA, DNA popravljalni mehanizmi, DNA mutacije, struktura in funkcija genov in kromosomov
RNA struktura in lastnosti, vrste RNA molekul in funkcije, transkripcija (prokarioti, eukarioti), postranskripcijske modifikacije
Struktura proteinov, sinteza proteinov, posttranslacijske modifikacije proteinov, zvijanje proteinov, transport proteinov
Regulacija proteinske sinteze: regulacija ekspresije genov pri prokariotih, pri bakteriofagih, pri evkariotskih organizmih (enoceličnih, multicelularnih, povezava z embrionalnim razvojem), regulacija na ravni translacije in posttranslacijska regulacija, Embrionalni razvoj
Celični cikel, proliferacija, diferenciacija celic, apoptoza

Content (syllabus outline):

DNA structure and characteristics, replication (prokaryotes, eukaryotes), recombination, repair and mutations, structure and function of genes and chromosomes,
RNA structure characteristics: role of different types of RNA, transcription (prokaryotes, eukaryotes), post transcription modification
Protein structures, synthesis of proteins, translation, posttranslational modifications, protein folding, protein trafficking
Regulation of protein synthesis: transcriptional regulation of gene expression, regulation of translation, posttranslational regulation
Embryonic development

Povezovanje celic v tkiva, komunikacija med celicami, signalne poti, receptorji, hormoni Imunski sistem in avtoimunske bolezni Virusi, HIV, SARS, DNA diagnostika pri infekcijskih boleznih Molekularna patologija: molekularni mehanizmi vključeni v nastanek bolezni, od bolezni do gena metode in eksperimentalne tehnike v molekularni biologiji: izolacija bioloških materialov (DNA, RNA, proteinov) iz kliničnih vzorcev (kri, biopsije, tkivo-resektati) in celičnih kultur, izolacija plazmidne DNA, gelska elektroforeza, pomnoževanje DNA z verižno reakcijo z encimom polimerazo (PCR), analiza genske ekspresije z metodo PCR v realnem času (Taqman), hibridizacija odtisa (southern, northern, western), konstrukcija cDNA in genomskih knjižnic, Rekombinantna DNA tehnologija, kloniranje človekovih genov Monogenske genetske bolezni, kompleksne genetske bolezni, Molekularna biologija raka: onkogeni, tumorsko zaviralni geni, dedne oblike, molekulska diagnostika in zdravljenje, biološka zdravila Vloga molekularne biologije v sodobni družba: etični, sociološki in ekonomski vidiki	Cell division (meiosis, mitosis) Cell cycle: proliferation, differentiation, apoptosis Integration of cells into tissues, communication between cells, signal transduction, receptors, hormone signaling Immune system Viruses :HIV, SARS, Avian influence, DNA diagnostics and infection diseases Molecular pathology: from disease to gene Methods and experimental techniques in molecular biology: isolation of biological molecules (DNA, RNA, proteins) from clinical samples (blood, biopsy, tissue, resection specimens) and cell cultures; plasmid DNA isolation, Polymerase Chain Reaction (PCR), gene expression analysis using Real time PCR (Taqman); hybridization and blotting (southern, western, northern); cDNA and genomic libraries Recombinant DNA technology, cloning of human genes Monogenic (Mendelian) and complex diseases Molecular biology of cancer: oncogenes, tumor suppressor genes, hereditary cancer, molecular diagnostics and treatment, biological drugs Molecular biology and society: ethical and economical aspects
--	---

(ed.): Pharmacogenomics, The Search for Individualized Therapies, John Wiley&Sons, 2002 R.J.M
--

Cilji in kompetence:

Predmet bo nudil študentom poglobitev razumevanja bistvenih molekularnih in bioloških procesov v celici, tkivih, organih in celotnem organizmu. Poseben poudarek bo na razumevanju patoloških sprememb v molekularnih procesih pri nastanku, razvoju in zdravljenju bolezni. Predstavljene bodo osnovne metode in eksperimentalne tehnike v molekularni biologiji in molekularni patologiji ter njihova uporaba pri raziskavah in preiskavah molekularnih označevalcev v diagnostiki, prognozi, načrtovanju novih zdravil in individualiziranem zdravljenju
--

Objectives and competences:

Student will have deep understanding of molecular and biological processes in cells, tissues, organs and whole human organism during health and disease. The focus will be on molecular mechanisms during disease development and treatment. Student will learn most important molecular biology and molecular pathology laboratory methods for diagnostics, biomarker discovery, novel drug development and individualized treatment based on patients genetic makeup.
--

Predvideni študijski rezultati:

Znanje in razumevanje:
osnovnimi molekularnimi in biološkimi procesi v celici, tkivih, organih in celotnem organizmu v zdravju in bolezni
Prenesljive/ključne spretnosti in drugi atributi:
laboratorijske metode in eksperimenti v biomedicini

Intended learning outcomes:

Knowledge and Understanding:
molecular and biological processes in cells, tissues, organs and whole human organism during health and disease
Transferable/Key Skills and other attributes:
laboratory methods and experimental techniques in biomedicine

Metode poučevanja in učenja:

- Predavanje - Seminar

Learning and teaching methods:

- Lectures - Seminar

Načini ocenjevanja:		Delež (v %) / Share (in %)	Assessment methods:
Način (pisni izpit, ustno izpraševanje, naloge, projekt)	seminar	40	Type (examination, oral, coursework, project):
	pisni izpit	60	seminar written exam
ŠTUDIJSKE OBVEZNOSTI ŠTUDENTOV:			ACADEMIC OBLIGATIONS OF STUDENTS:
-študenti napišejo seminar na izbrano tematiko in ustno predstavijo seminar s kratkim predavanjem			-students should write an essay on selected topic and give oral presentation (seminar)
-pisni izpit			-written exam
POGOJI ZA PRISTOP K POSAMEZNEMU PREVERJANJU ZNANJA:			REQUIREMENTS FOR ACCESS TO INDIVIDUAL KNOWLEDGE CHECKING:
Opravljen seminar je pogoj za pristop k pisnemu izpitu.			Students should complete seminar in order to approach to the written exam.
