**Introduction.** Пациенты, страдающие заболеваниями слезоотводящих органов, составляют 5- 16 % от общего числа больных с заболеваниями глаз. Слезотечение доставляет неприятные субъективные ощущения и часто нарушает трудоспособность.

**Purpose.** По данным литературы и материалам клиники оториноларингологии СПбГМУ им. акад. И.П. Павлова изучить методы хирургического лечения дакриоциститов, направленные на усовершенствование способа формирования соустья между слезным мешком и полостью носа.

**Materials and Methods.** Проводился ретроспективный анализ литературы и 14 историй болезни пациентов в возрасте от 23 до 71 года, оперированных в клинике оториноларингологии СПбГМУ им. акад. И.П. Павлова по поводу дакриоцистита в течение двух лет.

**Results.** Выявлено преимущество эндоскопической лазерной дакриоцисториностомии перед иными видами хирургического вмешательства

**Conclusions.** Высокий процент рецидивов при дакриоциститах свидетельствует о том, что проблема хирургического лечения требует дальнейшего совершенствования.

**The author (co-authors) confirm full agreement with the requirements for the publication of abstracts.**
