

UČNI NAČRT PREDMETA / SUBJECT SPECIFICATION

| | |
|----------------|---|
| Predmet: | Anatomija s histologijo in embriologijo |
| Subject Title: | Anatomy with Histology and Embryology |

| Študijski program in stopnja Study programme and cycle | Študijska smer Study option | Letnik Year of study | Semester Semester |
|---|--------------------------------|-------------------------|----------------------|
| Dentalna medicina/Dental Medicine 2. stopnja/2nd cycle | | 1 | 1., 2. 1., 2. |

Vrsta predmeta / Course type

Obvezni/Compulsory

Univerzitetna koda predmeta / University subject code:

| Predavanja Lectures | Seminar Seminar | Vaje Tutorial | Klinične vaje Clinical training | Druge oblike študija Other forms of study | Samost. delo Individual work | ECTS |
|------------------------|--------------------|------------------|------------------------------------|--|---------------------------------|------|
| 90 | 45 | 120 | | | 225 | 16 |

Nosilec predmeta / Lecturer:

doc. dr. Lidija Kocbek Šaherl
doc. dr. Mateja RakušaJeziki /
Languages:

Predavanja / Lecture: slovenščina/slovene

Vaje / Tutorial: slovenščina/slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih
obveznosti:

Vsebina:

Anatomija

Vsebina obsega sistematsko in topografsko anatomijo človeškega telesa s poudarkom na glavi in vratu:

- Uvod v anatomijo
- Vrat in glava
- Centralni živčni sistem
- Prsni koš
- Trebuh
- Medenica
- Zgornji ud
- Spodnji ud

Histologija

Vsebina obsega splošno in specialno histologijo človeškega telesa

Splošna histologija

- Epitelijska tkiva
 - Veziva
 - Mišičnina
 - Živčno tkivo
- Specialna histologija
- Obtočila
 - Kri

Content (Syllabus outline):

Anatomy

Content comprises systematic and topographic anatomy of human body with emphasis on the head and neck:

- Introduction to anatomy
- Neck and head
- Central nervous system
- Thorax
- Abdomen
- Pelvis
- Superior extremity
- Inferior extremity

Histology

Content comprises general and special histology of human body

General histology

- Epithelia
 - Connective tissue
 - Muscular tissue
 - Nervous tissue
- Special histology
- Vascular system
 - Blood

Cilji:

Zagotoviti študentu znanje anatomije, histologije in embriologije, ki je potrebno za razumevanje poznejših predkliničnih in kliničnih predmetov.

Predvideni študijski rezultati:**Znanje in razumevanje:**

Študent mora poznati razmere na truplu in anatomske modelih ob upoštevanju vseh vidikov anatomije na živem; temeljno je poznavanje anatomije pri odraslem človeku. V nekaterih primerih je potrebno poznati tudi

Objectives:

Provide a student with knowledge of anatomy, histology and embryology that is necessary for understanding of other preclinical and clinical subjects.

Intended learning outcomes:**Knowledge and understanding:**

A student has to recognize the relations on cadavers and anatomical models in consideration of all the aspects of anatomy in living human. Knowing of anatomy of adult human body is basic, although in some instances it is

specifično anatomijo različnih starostnih obdobjij ter možne pogosteje variante, kar je pomembno za razumevanje klinične medicine. Znanje histologije – mikroskopske zgradbe človekovega organizma, s posebnim poudarkom na funkciji posameznih celic, tkiv in organov (histofiziologija) in spoznanje posameznih stopenj v embrionalnem razvoju je enako pomembno za nadaljnji študij.

Prenesljive/ključne spremnosti in drugi atributi:
Temeljno medicinsko znanje o zgradbi in delovanju ter razvoju zdravega človeškega telesa omogoča študentu, da tokom nadaljnega študija to znanje uporabi za razumevanje bolezenskih sprememb in razvojnih anomalij.

Metode poučevanja in učenja:

Predavanja
Seminarji
Vaje

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

ŠTUDIJSKE OBVEZNOSTI ŠTUDENTOV
Opravljene vaje (100%)
Opravljeni seminarji (100%)

POGOJ ZA PRISTOP K IZPITU so opravljeni vsi obvezni kolokviji iz Anatomije (80%):

- Thorax, Abdomen, Pelvis (20%)
- Membrum superius (1,5%)
- Membrum inferius (1,5%)
- Collum et caput (50%)
- Systema nervosum centrale (7%)

in Histologije z embriologijo (20%)

Pogoji za prijavo na izpit in pristop k izpitu so opravljeni vsi obvezni kolokviji.

Študenti, ki niso opravili vseh obveznih kolokvijev, morajo opraviti predizpitni kolokvij. Predizpitni kolokvij sestoji iz vseh manjkajočih kolokvijev in ga opravljajo študenti pred izpitom. Pogoj za pristop k predizpitnemu kolokviju je prijava na izpit.

IZPIT

pisni izpit 50 %
ustni izpit 50 %

Izpit je sestavljen iz dveh delov:

1) pisni del - študent mora pravilno odgovoriti na vprašanja iz topografske anatomije glave in vrata ter ostalih delov človeškega telesa

necessary to recognize anatomical variations of different periods of human age, which is important for understanding of clinical medicine. The knowing of histology – the microscopic structure of human organism, with an emphasis on the function of certain cells, tissues and organs (histophysiology) and the knowledge of certain stages in embryonal development is also important for further studies.

Transferable/Key Skills and other attributes:

The basic medical knowledge about the structure, function and the development of the healthy human body, enables a student to apply it in recognition and comprehension of pathological changes and developmental anomalies in the course of his further studies.

Learning and teaching methods:

Lectures
Seminars
Tutorial

Delež (v %) / Assessment: Weight (in %)

| | | |
|--|---|---|
| | | Type (examination, oral, coursework, project): ACADEMIC OBLIGATIONS OF STUDENTS: Completed practical work (100%) Completed seminars (100%) REQUIREMENTS FOR ACCESS TO INDIVIDUAL KNOWLEDGE CHECKING: are completed all the obligatory colloquia Anatomy (80%): <ul style="list-style-type: none"> – The thorax. The abdomen, The pelvis (20%) – The superior extremity (1,5%) – The inferior extremity (1,5%) – The neck and head (50%) – The central nervous system (7%) And Histology with embryology (20%) Conditions for sign-up and approach to the examination are completed all the obligatory colloquia. The students who did not complete all the obligatory colloquia must pass the preexaminal colloquium. The preexaminal colloquium consists of all the missing colloquia and it must be completed before the examination. The condition for approaching the preexaminal colloquium is the sign-up to the examination. THE EXAMINATION written examination 50% oral examination 50% |
| | Anatomija s histologijo in embriologijo (100 %) od tega 50 % 50 % | The exam consists of two parts: 1) the written part - the student must answer correctly the questions from the topographical anatomy head, neck and other parts of the human body |

| | | |
|---|--|---|
| 2) ustni del - študent mora točno odgovoriti na vprašanja iz topografske anatomije glave in vratu ter ostalih delov človeškega telesa. | | 2) the oral part - the student must answer correctly the questions from the topographical anatomy head, neck and other parts of the human body. |
