<b>Vsebina:</b>	<b>Content (Syllabus outline):</b>
Opredelitev pojma znanosti. Razmejitve med strokovnim in raziskovalnim delom kot virom novega znanja. Spoznati splošne metode znanstveno raziskovalnega dela, pomen povezanosti teoretičnih znanj in uporabe v klinični medicini, algoritmi odlocanja. Raziskovalno delo kot metoda preverjanja kliničnih odločitev in odgovornega sledenja posledic. Etična in pravna vprašanja pri raziskovanju v biomedicini. Definiranje odnosov vzrok – posledica v biomedicini in vloga presejalnih testov. Razumevanje osnovnih statističnih pojmov v biomedicini (incidenca, prevalenca, pozitivna in negativna napovedna vrednost, občutljivost in specifikost testov, lažno pozitivnih in negativnih rezultatov), pomena relativnega tveganja in razmerja obetov. Razlikovanje prospektivnih, retrospektivnih, epidemioloških, kontroliranih, randomiziranih, kohortnih, primer – kontrola in dvojno slepih vrst raziskav. Pomen racunalniške tehnologije in statističnih orodij pri znanstveno raziskovalnem delu. Statistični del: raziskovalni proces, kvalitativna in kvantitativna analiza podatkov, osnovni statistični pojmi (vrste spremenljivk, verjetnostne porazdelitve, mere	Definition of the term science. Boundaries between scientific and research work as sources of new knowledge. Common methods of scientific research, meaning of liaison of theoretical knowledge and its application in clinical medicine, algorithms of decision making. Research work as method of clinical decisions and responsible consequences following-up testing. Ethical and legislative questions in biomedicine research. Definition of relations between cause – consequence in biomedicine and role of screening tests. Comprehension of basic statistic terms in biomedicine (incidence, prevalence, positive and negative prognostic values, sensitivity and specificity of tests, false positive and negative results), meaning of relative risk and expectation ratio. Distinguishes between prospective, retrospective, epidemiologic, followed-up, randomised, cohort , case – control, and double blind researches. Importance of computer technology and statistic software in scientific research work. Statistical part: the research process, qualitative and quantitative data analysis, basic statistical concepts (types of variables, probability distributions, central tendency

centralne tendence in mere variabilnosti), osnove statističnega sklepanja (frekvenčna porazdelitev, ničelna domneva, standardna napaka, interval zaupanja), univariatna statistična analiza (predstavitev podatkov:tabelarna, grafična), univariatni statistični testi, bivariatna statistična analiza (odvisnosti med spremenljivkama), bivariatni parametrični testi (t-test, korelacija, ANOVA, t- test za odvisne vzorce), bivariatni neparametrični statistični testi. (Mann-Whitney U test, neparametrična korelacija, hi-kvadrat test, Kruskal-Wallis H test, Median test, neparametrični statistični testi za odvisne vzorce).

Osnove genetike, anatomije in fiziologije laboratorijskih živali. Primerjava laboratorijskih živali in človeka, prednosti in slabosti živalskih modelov. Etika pri delu z laboratorijskimi živalmi. Osnove zakonodaje na področju laboratorijskega dela in dela z laboratorijskimi živalmi. Celični in tkivni modeli v predkliničnem raziskovanju. Gensko spremenjeni organizmi in njihova vloga v predkliničnih raziskavah.

Elektro- in opto-fiziološke metode. Obdelava in statistična analiza podatkov pri predkliničnem raziskovanju. Pregled literature in dostop do znanstvene literature. Publiciranje v predkliniki. Pregled sodobnih laboratorijskih metod. Seminarske vaje: metode statistične genetike za iskanje povezav genotip/fenotip.

and measures of variability), basics of statistical conclusions (frequency distribution, null hypothesis, standard error, confidence interval), univariate statistical analysis (presentation of data: tables, graphs), single variant statistical tests, bivariate statistical analysis (dependence between variables), bivariate parametric tests (t - test, correlation, ANOVA, t-test for paired samples), bivariate nonparametric statistical tests (Mann - Whitney U test, non-parametric correlation, chi-square test, Kruskal - Wallis H test and the median test, nonparametric statistical tests for dependent samples).

Basic genetics, anatomy and physiology of laboratory animals. Comparison between laboratory animals and humans, advantages and disadvantages of animal models. Animal research ethics. Legislation in the field of laboratory work and work with laboratory animals. Cellular and tissue models in basic medical research. Genetically modified organisms and their role in basic medical research. Electrical and optical methods in basic medical research. Statistical analysis of data in basic medical research. Literature review and access to scientific literature. Publishing in basic medical research. Review of modern laboratory methods. Seminars work: methods of statistical genetics for the search for genotype / phenotype.

2. Fox. J.G.: The mouse in biomedical research. Second edition. Volume I & II. Academic Press, 2006.
3. Pawley J. Handbook of Biological Confocal Microscopy. 3rd ed. Springer, 2006.
4. Zakon o zaščiti živali (ZZZiv-UPB3), Uradni list RS, št. 38/2013 z dne 3. 5. 2013.
5. Pravilnik o pogojih za izvajanje poskusov na živalih. Uradni list RS, št 37/2013, 29. 4. 2013.
6. Robert Nussbaum, Roderick McInnes, Huntington Willard. Thompson & Thompson Genetics in Medicine. 8th ed., Philadelphia: Elsevier, 2015

#### **Cilji in kompetence:**

Poglavitni cilj predmeta je pridobitev nekaterih teoretičnih znanj in praktičnih veščin, ki jih potrebuje raziskovalec pri raziskovalnem delu v biomedicini. Spoznati osnove raziskovalnega dela v biomedicini in bioznanostih, povezano in pomen epidemiologije, biostatistike in njenih orodij (statističnih testov, vrednotenja), vloga izsledkov na odločanje.

Študenti bodo znali na osnovi pregleda znanstvene literature ugotoviti trenutno stanje znanja na področju določene biomedicinske problematike, odkriti še neodgovorjena relevantna znanstvena vprašanja, postaviti hipotezo in načrtovati biomedicinsko študijo, ki bo ustrezno ovrednotila hipotezo. Študenti bodo

#### **Objectives and competences:**

The major aim of the course is to gain the theoretical knowledge and practical skills needed for a researcher in biomedical research. Acquiring of basic knowledge about researching in biomedicine and biosciences, relationship and importance of epidemiology, biostatistics and their tools (statistic tests, evaluation) importance of findings for decision making.

Students will be able to perform systematic review of scientific literature and to establish the state-of-art in the specific biomedical research topic. Students will be able to identify relevant open scientific questions, to set the appropriate hypothesis and to design biomedical study to evaluate the hypothesis. Students will be able to write and

<p>sposobni napisati in izvesti raziskovalni projekt s katerim bodo odgovorili na določena klinična vprašanja s pomočjo rezultatov biokemijskih in genetskih laboratorijskih preiskav.</p> <p>Študenti bodo poznali in razumeli delovanje najpomembnejših tehnologij za raziskovanje na področju biomedicine, predvsem biokemije in genetike, in bodo znali uporabiti tehnologije za reševanje relevantnih kliničnih vprašanj.</p>	<p>execute the research project to answer specific clinical questions using the results from biochemical and genetic laboratory investigations.</p> <p>Students will understand the working the state-of-art laboratory technology most relevant for biomedical research, including biochemistry and genetics, and will be able to use the technology to address relevant clinical issues.</p>
--	--

**Predvideni študijski rezultati:****Intended learning outcomes:**

Znanje in razumevanje: pomena znanosti, kriticnega vrednotenja izsledkov raziskav v biomedicini in preverjanje domnev. Sposobnost analize znanstveno raziskovalnih prispevkov, vsebinska in kvalitativna. Prenosljive/ključne spretnosti in drugi atributi: nacrtovanje raziskave, pomen natancnosti in točnosti pri zbiranju podatkov in izvajaju raziskave, obdelava in kvantitativna/kvalitativna interpretacija pridobljenih rezultatov v skladu z zanimimi dejstvi in pridobljenimi novimi spoznanji.

Knowledge and understanding: knowledge and understanding of science, critical assessment of the research results in biomedicine and hypothesis testing. Ability of scientific research contributions, content and quality analyse.

Transferable/key skills and other attributes: research planning, meaning of precision and accuracy in data collection, carrying out of the research, data processing, quantitative and qualitative interpretation of results according to known facts and new findings.

**Metode poučevanja in učenja:****Learning and teaching methods:**
