

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Ime predmeta: Course title:	Celična fiziologija Cell Physiology					
Študijski program in stopnja Study programme and cycle	Študijska smer Study option			Letnik Year of study	Semester Semester	
Biomedicinska tehnologija/3. stopnja Biomedical Technology/3rd Degree				2	3 ali 4	
Vrsta predmeta (obvezni ali izbirni) / Course type (compulsory or elective)				Izbirni Elective		
Univerzitetna koda predmeta / University course code:						
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje Clinical training	Druge oblike študija Other forms of study	Samost. delo Individual work	ECTS
15	20	10			135	6
		AV	LV			
Nosilec predmeta / Course coordinator:	Izr. prof. dr. Andraž Stožer Doc. dr. Maša Skelin Klemen					
Jeziki /Languages:	Predavanja / Lectures:		Slovenščina/Slovene			
	Vaje / Tutorial:		Slovenščina/Slovene			
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites for enrolling in the course or for performing study obligations:					
Vsebina (kratek pregled učnega načrta):	Content (syllabus outline):					
Uvod v celično fiziologijo Zunaj- in znotrajcelične signalne poti Metode za študij funkcije ionskih kanalov Ionski kanalčki in transporterji v biološki membrani Homeostaza citosolnega kalcija in drugih ionov Mikrospektrofluorimetrija in dinamično slikanje anionov in kationov v posamezni celici Molekularni mehanizmi uravnavanja vezikularnega transporta snovi Pristopi za študij sekrecije hormonov in nevrotransmitorjev Membranski receptorji Določanje fiziološke vloge identificiranih in kloniranih rekombinantnih beljakovin na ravni posamezne celice	Introduction to cell physiology Extra- and intracellular signalling Methods to study ion channel function Ion channels and transporters in biological membrane Homeostasis of cell calcium and other ions Mikrospectrophuorometry and functional imaging of anions and cations in a single cell Molecular mechanisms of regulation of vesicular transport Approaches to study the release of hormones and neurotransmitters Membrane receptors Determination of the physiological role of identified and cloned recombinant proteins on a single cell level					

Uporaba laboratorijskih živali in njihovih tkiv ter človeških tkiv v celični fiziologiji: biološki, organizacijski in pravni okvirji.	Use of laboratory animals and their tissues, as well as human tissues in cell physiology: biological, organizational, and legislative aspects.

Cilji in kompetence:	Objectives and competences:	
Poglavitni cilj predmeta je poglavljjanje znanja o primarnih fizioloških procesih na celični ravni v normalnih in bolezenskih razmerah. Osrednji predmet preučevanja so procesi, ki potekajo na celičnih membranah in z njimi povezane signalne poti v celici in glavne tarče teh signalnih procesov, predvsem kontraktilni elementi in eksocitoski veziki v električno vzdražnih in nevzdražnih celicah. Preučevanje genetskih in okoljskih patofizioloških sprememb v navedenih poteh predmetu dodaja veliko klinično relevantnost.	The major aim of the course is to gain in-depth knowledge about primary physiological processes on at the single cell level in normal and diseased conditions. The main focus are the processes on the cellular membranes and the associated intracellular signalling pathways, as well as their main targets, more specifically the contractile elements and exocytotic vesicles in electrically excitable and non-excitable cells. Studying genetic and environmental changes in the above pathways adds clinical relevance to the subject.	
Predvideni študijski rezultati:	Intended learning outcomes:	
Znanje in razumevanje: Poglobljeno znanje o fiziologiji celične membrane in poglavitnih ionskih kanalih. Razumevanje metod, ki se uporabljajo v celični fiziologiji.	Knowledge and understanding: In-depth knowledge about physiology of the cell membrane and major ion channels types. Understanding the methods used in cell physiology.	
Prenosljive/ključne spremnosti in drugi atributi: Potencialni transfer znanja v farmacevtsko industrijo. Študent pridobi ustrezeno teoretično znanje in praktične veščine, uporabne v številnih drugih laboratorijih za vede o življenju. Osvoji ustrezeno nomenklaturo, pregled nad literaturo in vrsto podatkov in načine prikazovanja in interpretacije rezultatov, ki vključuje tudi statistično interpretacijo rezultatov. Kritično razmišljanje, timsko delo, kreativnost, ustno in pisno komuniciranje, reševanje problemov in samokontrola.	Transferable/key competences and other abilities: Potential transfer of knowledge into the pharmaceutical industry. Student gets suitable theoretical knowledge and practical skills that can be used in many other life science laboratories. She learns the relevant vocabulary, receives an overview over the literature in the field, the nature of data, their visualization, and interpretation that includes statistical interpretation. Critical thinking, teamwork, creativity, oral and written communication, problem solving and self-control.	
Metode poučevanja in učenja:	Learning and teaching methods:	
Predavanja Seminarji Vaje (demonstracija in laboratorijski nadzor) Samostojno delo	Lectures Seminars Tutorial (practicals with demonstrations and laboratory supervision) Individual work	
Načini ocenjevanja:	Delež (v %) / Share (in %)	Assessment methods:
Način (pisni izpit, ustno izpraševanje, naloge, projekt)		Method (written or oral exam, coursework, project):
Seminar – pregledni članek Izvedene praktične vaje - projekt	50 % 50 %	Seminar – review article Successfully conducted practical tutorial – project work
