

OPIS PREDMETA / SUBJECT SPECIFICATION

Predmet: Subject Title:	Izbrana poglavja iz kardiologije Chosen chapters from Cardiology
----------------------------	---------------------------------------------------------------------

Študijski program Study programme	Študijska smer Study field	Letnik Year	Semester Semester
Biomedicinska tehnologija / biomedical technology	Kardiologija / cardiology	2	3 ali 4

Univerzitetna koda predmeta / University
subject code:

--

Predavanja Lectures	Seminar Seminar	Sem. vaje Tutorial	Lab. vaje Lab. work	Teren. vaje Field work	Samost. delo Individ. work	ECTS
15	30				105	5

Nosilec predmeta / Lecturer:	prof.dr. Voga / Prof. dr. Andreja Sinkovič / Prof. dr. Matej Podbregar
Jeziki / Languages:	Predavanja / Lecture: Slovensko / angleško Vaje / Tutorial: Slovene / english
Vaje / Tutorial:	Slovensko / angleško Slovene / english

Pogoji za vključitev v delo oz. za opravljanje
študijskih obveznosti:

Kandidat mora doseči 300 ECTS na
predhodnem študiju.

Graduate degree 300 ECTS

Vsebina:

Raziskovalni principi na področju srčno-žilnih bolezni in z aktualnimi raziskovalnimi trendi na tem področju. Poudarek bo na biotehnoloških metodah v diagnostiki in zdravljenju srčno žilnih bolezni ter povezavi med biotehnologijo in patofiziologijo (mikrooksigenacijo, makrooksigenacijo), oziroma patomorfologijo bolezni srca in ožilja.

Področje posebnega zanimanja bo ateroskleroza, vključno in predvsem koronarna bolezen srca, tako akutni koronarni sindrom kot kronična ishemična srčna bolezen s posledičnim pešanjem srca.

Pomembno področje zanimanja je tudi elektrofiziologija z aritmijami in elektrostimulacijo srca.

Acquaintance with principles of research and current research trends in the field of cardiovascular medicine. The emphasis will be biotechnological methods in diagnosis and treatment of cardiovascular diseases, as well as correlation between biotechnology and patophysiology (microoxygenation, microoxygenation, etc.) and between biotechnology and pathology of cardiovascular diseases.

Main interest will be atherosclerosis, especially coronary heart disease, including acute coronary syndromes and chronic ischemic heart disease with the consequent heart failure. Electrophysiology, arrhythmias and electrostimulation of the heart will also be studied.

Temeljni študijski viri / Textbooks:

- Braunwald E, Zipes DP, Libby P, Bonow R (eds.). Braunwald's Heart Disease: A Textbook of Cardiovascular Medicine. 7th ed. W.B. Saunders 2004.
- Kasper DL, Braunwald E, Fauci A, Hauser S, Longo D, Jameson JL. Harrison's Principles of Internal Medicine. 16th ed. McGraw-Hill Professional 2004.
- Dalla Volta S, Braunwald E, Bayes de Luna A, Jezek V, Brochier ML; Mortensen SA, Dienstl F, Poole-Wilson PA (eds.). Cardiology. 1st Edition. McGrawHill Companies 1999.

Cilji:

Raziskovalno delo in samostojno raziskovalno delo na področju kardiologije, povezava

Objectives:

Research work and to become autonomous in their research effort in the field of

<p>rezultatov različnih biotehnoloških metod (laboratorijski biomarkerji, elektrokardiografija, ultrazvok, uporaba intravenskih in arterijskih kateetrov, itd.) s pojavnostjo, prognozo, patofiziologijo, patomorfologijo posameznih bolezenskih stanj v kardiologiji, ki bodo lahko osnova za nadaljnjo diagnostiko, zdravljenje, pa tudi raziskovanje tega področja.</p>	<p>cardiovascular medicine To link together different biotechnological methods (estimation of laboratory biomarkers, electrocardiogram, ultrasound, the use of intravenous and arterial catheters, etc.) and epidemiology, clinical manifestation, prognosis, patophysiology, patomorphology of different cardiovascular entities in order to provide results that would also represent the basic for further studies.</p>
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Predvideni študijski rezultati:

<p>Znanje in razumevanje: Pridobiti poglobljeno znanje in razumevanje patofiziologije na določenem področju srčno žilnih bolezni, predvsem akutnega koronarnega sindroma, aritmij, pešanja srca.</p> <p>Prenesljive/ključne spretnosti in drugi atributi: Te spretnosti so individualne in predvsem odvisne od vrste zastavljene raziskave</p> <p>Metode poučevanja in učenja:</p>	<p>Knowledge and Understanding: To acquire broad knowledge and understanding of patophysiology of different cardiovascular diseases, especially of acute coronary syndromes, arrhythmias, heart failure</p> <p>Transferable/Key Skills and other attributes: Skills are individual and mainly depend on the goal of individual research study</p> <p>Learning and teaching methods:</p>
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>Predavanja, seminarji, predvsem pa individualno raziskovalno delo</p> <p>Načini ocenjevanja: Delež (v %) / Weight (in %)</p>	<p>Lectures, seminars, but mostly individual engagement in research work</p> <p>Assessment:</p> <p>Type (examination, oral, coursework, project): Regular informal oral verifying of gathered knowledge combined with oral examinations, seminars after completed individual work and finally presentation of results at conferences as oral or poster presentations.</p>
---------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>Materialni pogoji za izvedbo predmeta :</p> <p>Za izvedbo raziskovalnega dela bodo potrebni določeni materialni pogoji kot je laboratorijska oprema, reagenti, računalniška oprema, elektrokardiogram, ultrazvok, monitorji in katetri, itd.</p>	<p>Material conditions for subject realization</p> <p>To be able to carry our the research work certain conditions should be fullfilled regarding laboratory equipment, computers, electrocardiography, ultrasound, monitors and catheters.</p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p>Obveznosti študentov: (pisni, ustni izpit, naloge, projekti)</p> <p>Ob rednem ustrem preverjanju napredovanja v raziskovalnem delu bodo še kolokviji po končanih predavanjih in seminarjih, seminarsko delo po opravljenem raziskovalnem delu, predvsem pa objava dobljenih rezultatov v strokovnih in znanstvenih revijah.</p>	<p>Students' commitments: (written, oral examination, coursework, projects):</p> <p>Besides regular oral examinations, there will be seminars after completed individual work and finally presentation of results at conferences as oral or poster presentations.</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Opomba: Vse sestavine opisa predmeta do vključno z načini ocenjevanja za izvedbo predmeta so obvezna sestavina učnega načrta predmeta kot ga določajo Merila za akreditacijo visokošolskih zavodov in študijskih programov (UI. RS, št. 101/2004) v 7. členu. Obveznosti študentov ne sodijo k sestavinam opisa predmeta, so pa obvezni del sestavin študijskih programov in zato priporočljiv del obrazca opisa predmetov. Vse nadaljnje sestavine opisa v ležeči pisavi niso obvezne.
