				AV LV RV									
Nosilec predmeta / Course coordinator:				izr. prof. dr. Tomaž Gračner, dr.med.									
Jeziki /Languages:		Predavanja / Lectures:				Slovenščina/Slovene							
		Vaje / Tutorial:				Slovenščina/Slovene							
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:						Prerequisites for enrolling in the course or for performing study obligations:							
Vsebina (kratek pregled učnega načrta):						Content (syllabus outline):							
Vsebina študijskega predmeta »Izbrana poglavja iz oftalmologije« zajema predvsem proučevanje novih metodologij za diagnostiko, spremljanje in presojanje zdravljenja določenih bolezenskih entitet s področja oftalmologije. Študij bo osredotočen na proučevanje novih možnosti za zgodnjo diagnostiko bolezenskih sprememb in proučevanje senzitivnosti posameznih diagnostičnih preiskav za posamezne bolezni ali terapijo. Med seboj bo primerjal posamezne metode raziskovanja in proučeval prednosti in pomanjkljivosti posameznih metod ter primerjal učinkovitost različnih terapevtskih postopkov. Študij bo predstavljal povezavo med kliničnim delom, kliničnim znanstvenim raziskovanjem ter						The contents of the study programme »Chosen chapters from ophthalmology« comprise above all the studying of new methodologies for diagnosis, following and evaluation of treatment of specific disease entities from the field of ophthalmology. They will concentrate on the new possibilities for early diagnosis of pathologic changes and the investigation of the sensitivity of individual diagnostic procedures for individual disease or therapy. Individual research methods will be compared and the advantages and shortcomings of individual methods studied, and the effectiveness of different therapeutic procedures will be compared. The studies will represent a connection between clinical work, clinical scientific research and new							

novimi spoznanji sodobnih diagnostičnih preiskav in zdravljenja. Poudarek bo predvsem na naslednjih bolezenskih entitetah: diabetični bolniki glavkomi bolniki (bolniki s povišanim očesnim pritiskom) refrakcija in korekcija vida nevrooftalmološke preiskave izboljšanje in novosti operativne mikrokirurške tehnike funkcionalne preiskave senzitivnost oftalmoloških preiskav pri ugotavljanju sistemskih imunoloških bolezni infekcija in oko imunološke bolezni očesa travmatologija v oftalmologiji	knowledge acquired by modern diagnostic investigation and treatment. The stress will be above all on the following disease entities: Diabetic patients Glaucoma patients (pts with increased ocular pressure) Refraction and correction of vision Neuroophthalmologic investigations Improvements and novelties in operative microsurgical techniques Functional investigations Sensitivity of ophthalmologic investigations in identifying systemic immunologic disease Infection and the eye Immunologic eye disease Traumatology in ophthalmology
Temeljni literatura in viri / Reading materials: - American Academy of Ophthalmology (all sections), Basic and Clinical science course, P.O. Box 7424, San Francisco, USA, 2022-2023 - M.Yanof, Y.Duker. Ophthalmology 6th Edition, 2022, Elsevier - JF Salmon. Kanskis Clinical Ophthalmology, 10th Edition, 2024, Elsevier	
Cilji in kompetence: Cilj študija »Izbrana poglavja iz oftalmologije« je prenesti spoznanja diagnostičnih metod in najustrežnejšega zdravljenja v klinično prakso. Poudarek je na tistih bolezenskih stanjih, ki v največji meri vplivajo na obolevnost prebivalstva in s tem na invalidnost. Zato bo cilj uvajanje novih in izboljšanje sodobnih postopkov zgodnjega odkrivanja obolevnosti. Končni cilj je čimprejšnja rehabilitacija vida ne glede na vzroke.	Objectives and competences: The objective of the study »Chosen chapters from ophthalmology« is to transfer the comprehension of diagnostic methods and of the most suitable methods of treatment to clinical practice. The stress will be on the pathologic conditions most highly affecting the morbidity of the population and thus also the disability. Therefore the objective will be the introduction of new and improvement of contemporary procedures for the early detection of morbidity. The ultimate aim is the earliest possible rehabilitation of vision regardless of the cause of its impairment.
Predvideni študijski rezultati:	Intended learning outcomes:
Znanje in razumevanje: Osvojitev novih znanj s področja oftalmologije, ki jih bo mogoče neposredno koristiti v procesu zdravljenja in spremljanja bolezni.	Knowledge and understanding: Acquired new knowledge in the field of ophthalmology, which can be applied directly in the processes of treatment and following of eye disease.
Prenosljive/ključne spretnosti in drugi atributi: Odkrivanje od raziskovalnega področja in samega raziskovalnega projekta. Integriranje in uvajanje novih postopkov zgodnjega odkrivanja obolevnosti vida.	Transferable/key competences and other abilities: Depends on the research field and on the research project. Integration and introduction of new and improvement of contemporary procedures for the early detection of morbidity
Metode poučevanja in učenja:	Learning and teaching methods:
Predavanja Seminarji	Lectures Seminars

Vaje (seminarske vaje) Samostojno delo		Tutorials Individual work
Načini ocenjevanja:	Delež (v %) / Share (in %)	Assessment methods:
Način (pisni izpit, ustno izpraševanje, naloge, projekt)		Method (written or oral exam, coursework, project):
