

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Uporabna biostatistika v kliničnih raziskavah
Course title:	Applied Biostatistics in Clinical Research

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Biomedicinska tehnologija/Biomedical Technology 3. stopnja/3rd Degree		2	3 ali 4

Vrsta predmeta / Course type	Izbirni/Elective
-------------------------------------	------------------

Univerzitetna koda predmeta / University course code:	
--------------------------------------------------------------	--

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. Delo Individ. Work	ECTS
15	30				105	5

Nosilec predmeta / Lecturer:	Prof. dr. Peter Kokol
-------------------------------------	-----------------------

Jeziki / Languages:	Predavanja / Lectures: Slovenščina / Slovene
	Vaje / Tutorial: -

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:
------------------------------------------------------------------------------	-----------------------

Kandidat mora doseči 300 ECTS na predhodnem študiju.	Graduate degree 300 ECTS
------------------------------------------------------	--------------------------

Vsebina:	Content (Syllabus outline):
<p>Osnovni pojmi</p> <ul style="list-style-type: none"> • Podatek • Spremenljivka • Hipoteza • Porazdelitev • Podatkovni tipi <p>Osnove statistične analize podatkov</p> <ul style="list-style-type: none"> • Priprava podatkov za statistično analizo • Analiza baze podatkov <ul style="list-style-type: none"> ◦ Deskriptivna analiza podatkov ◦ Grafična predstavitev podatkov ◦ Testiranje normalne porazdelitve • Postavitev hipotez • Korelacija <p>Regresija</p> <ul style="list-style-type: none"> • Linearna regresija • Logistična regresija <p>Parametrični testi</p> <ul style="list-style-type: none"> • Primerjava dveh povprečnih vrednosti <ul style="list-style-type: none"> ◦ Odvisen t-Test ◦ Neodvisen t-Test • Primerjava več povprečnih vrednosti (ANOVA) 	<p>Basic concepts</p> <ul style="list-style-type: none"> • Data • Variable • Hypothesis • Distribution • Data types <p>Basics of statistical data analysis</p> <ul style="list-style-type: none"> • Preparing data for statistical analysis • Exploring data <ul style="list-style-type: none"> ◦ Descriptive analysis ◦ Graphical representation of data ◦ Testing of normal distribution • Constructing hypotheses • Correlation <p>Regression</p> <ul style="list-style-type: none"> • Linear regression • Logistic regression <p>Parametric tests</p> <ul style="list-style-type: none"> • Comparing two means <ul style="list-style-type: none"> ◦ Dependent t-Test ◦ Independent t-Test • Comparing several means (ANOVA)

<p>Neparametrični testi</p> <ul style="list-style-type: none"> • Wilcoxon-ov test • Mann-Whitney test • Kruskal-Wallis test • Friedman-ova ANOVA <p>Testi za kategorične spremenljivke</p> <ul style="list-style-type: none"> • χ^2 test • Loglinearna analiza <p>Multivariatna analiza</p> <ul style="list-style-type: none"> • Priprava podatkov • Metode multivariatne analize: <ul style="list-style-type: none"> ◦ MANOVA ◦ Analiza kovariance ◦ Faktorska analiza ◦ Klastrska analiza <p>Analiza preživetja</p> <ul style="list-style-type: none"> • Priprava podatkov • Life Tabels • Kaplan-Meier • Cox-ova regresija <p>Praktični primeri</p>	<p>Nonparametric tests</p> <ul style="list-style-type: none"> • Wilcoxon test • Mann-Whitney test • Kruskal-Wallis test • Friedman's ANOVA <p>Testing categorical variables</p> <ul style="list-style-type: none"> • χ^2 test • Loglinear Analysis <p>Multivariate analysis</p> <ul style="list-style-type: none"> • Preparing data • Methods for multivariate analysis: <ul style="list-style-type: none"> ◦ MANOVA ◦ Analysis of covariance ◦ Factorial analysis ◦ Cluster analysis <p>Survival analysis</p> <ul style="list-style-type: none"> • Preparing data • Life Tabels • Kaplan Meier • Cox Regression <p>Practical examples</p>

- Joseph F. Hair, Bill Black, Barry Babin, Ralph E. Anderson, Ronald L. Tatham, Multivariate Data Analysis, Prentice Hall, 2005. ISBN: 0130329290.

Cilji in kompetence:

- Ponoviti osnovne statistične pojme
- Naučiti študente ustrezne priprave baze podatkov za statistično analizo
- Naučiti študente osnovne in naprednejše (multivariatne) statistične analize podatkov
- Naučiti študente izbire ustrezne metode za statistično analizo podatkov glede na postavljeno hipotezo
- Uporaba statistične analize podatkov v kliničnih raziskavah.

Objectives and competences:

- To renew basic statistical concepts.
- To instruct the students with preparation of database for statistical analysis.
- To introduce students to basic and advance (multivariate) statistical data analysis.
- To teach the students of selecting the appropriate method for statistical data analysis with regards to the hypothesis.
- Application of statistical data analysis on clinical trials.

Predvideni študijski rezultati:
Intended learning outcomes:
Znanje in razumevanje:
Študentje:

- se bodo zavedali pomena priprave podatkov ter

Knowledge and understanding:
Students:

- will realize the importance of preparation of data and

<p>izbire ustrezenje metode za statistično analizo glede na postavljeno hipotezo</p> <ul style="list-style-type: none"> - spoznali bodo različne možnosti grafične predstavitev podatkov, - spoznali bodo različne porazdelitve in najpogosteje načine normalizacije podatkov, - spoznali bodo najpogosteje uporabljene osnovne metode za statistično analizo podatkov - spoznali bodo metode za multivariatno analizo podatkov, - pridobljeno znanje bodo znali praktično uporabiti pri reševanju problemov z individualnega področja uporabe <p>Prenesljive/ključne spremestnosti in drugi atributi:</p> <ul style="list-style-type: none"> - študentje bodo največkrat znali uporabiti primerno metodo statistične analize glede na dani problem, - pridobljeno znanje bodo rutinirano uporabljali tako med študijem kot tudi pri kasnejšem delu, - izkušnje, pridobljene z implementacijo in študijem delovanja v mnogih splošnih primerih, bodo znali uporabiti v konkretnih praktičnih aplikacijah 	<p>selection of appropriate method for statistical data analysis with regards to the hypothesis</p> <ul style="list-style-type: none"> - will be acquainted with different graphical representation of data - will be acquainted with different data distributions and the most frequent normalization methods - will be acquainted with most frequently used basic methods for statistical data analysis - will be acquainted with methods for multivariate statistical data analysis - will be able to use new knowledge in practice for problems in their individual domains. <p>Transferable/Key Skills and other attributes:</p> <ul style="list-style-type: none"> - students will be (in most cases) able to select an appropriate method for statistical data analysis for solving a specific problem - they will use the acquired knowledge during their studies and also in their work - they will be able to apply the experiences gained with implementation and studies on general examples to practical usage
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Metode poučevanja in učenja:

Predavanja, razgovor, demonstracija, računalniške vaje.

Lectures, discussion, demonstration, computer exercises

Načini ocenjevanja:	Delež (v %) / Weight (in %)		Assessment:
	60	40	
<ul style="list-style-type: none"> - seminarska naloga - ustni izpit. 			<ul style="list-style-type: none"> - seminar work - oral examination.
