

Simulation in the Swedish military forces

Federico Centurion, last year medical student, former 1st lieutenant Swedish Amphibious Corps

Agenda

- My background
- Is military simulation unique?
- Need for innovation
- Learning by teaching
- Quality vs quantity
- Cooperation

My personal experiences

- Former officer, in the military for 8 years
- Now medical student
- One tour in Kosovo
- Rescue platoon leader

Me and the king 😊

The Amphibious Corps

- A highly modern part of the Swedish Navy
- Specialised in coastal areas and archipelago
- Anti-ship missiles
- Mines
- Naval infantry
- Anti-aircraft

Military simulation

- Need for innovation, since Sweden have had peace for almost 200 years...
- Save lives
- War is, obviously, dangerous

Modern = expensive?

- Military budget cuts
- Below is a picture of a Medical Treatment Simulator from SAAB Group.

Learning by teaching

- See one, do one, teach one?

Quality vs quantity?

- What is required of a teacher?
- What impact does that have on quantity and quality respectively?

Civilians vs military

- Civilians have the scientific approach
- The military have:
 - ✧ a rich experience
 - ✧ more challenging students

Cooperation

I recommend you to:

- Visit
- Watch
- Learn
- Teach!

Concluding remarks

- As an officer I've seen how we can benefit from each other
- The need for innovation is true everywhere
- Let your students teach!
- Quality is important, but quantity is also essential!
